Creating a safer environment
without compromising productivity

The all-compatible drives are designed to provide customers across industries and applications with unprecedented levels of compatibility and flexibility.

DC drives
Our DCS880 industrial drives are customized to meet the precise needs of industries such as oil and gas, mining, metals, cement, non motoric, material handling, pulp and paper, rubber and plastics, marine, water and wastewater, food and beverage and automotive. They control a wide range of applications such as cranes, extruders, winches, winders, conveyors, mixers, millstands, centrifuges, test benches, elevators, electrolysis, kiln.

DC motor control
ABB's motor control technology provides precise speed and torque control for all applications.

Adaptive programming
Adaptive programming is ideal for creating simple control programs for various applications. It does not require expertise in programming and is offered as a standard in all-compatible drives.

Removable memory unit
Stores all the firmware and parameter configurations in an easily replaceable and simple-to-install module.

All typical DC configurations
DCS880 standard firmware supports all standard configurations present in DC drive applications such as 6-pulse, 12-pulse parallel, serial and serial sequential, 24-pulse, M3, M6 and field reversal.

Remote monitoring
With a built-in web server, NETA-21 makes worldwide access easy for industry applications.

Drive-to-drive link (D2D)
Allows fast communication between drives including master-follower configurations as standard.

Drive application programming

Customizable to meet the precise application needs based on IEC 61131-3. Uses the same programming environment and is also easy to integrate with other ABB components such as PLCs and HMIs.
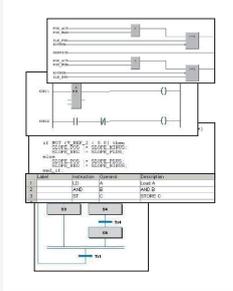

Safety

DCS880 offers safe torque off (STO) built in as a standard. It can be used in safety functions up to SIL3 /PLe enabling you to achieve every safety requirement.

Drives going mobile

We offer several smartphone applications to ease and enhance the use of ABB drives. These tools provide a user-friendly and easy-to-use approach for the commissioning, servicing and use of ABB drives.

Intuitive human-machine interface
User-friendly, high-contrast and high-resolution display enabling easy navigation in multiple languages. Allows USB and Bluetooth connection.

Startup and maintenance tool
Drive composer PC tool for drive startup, configuration and daily use and process tuning. PC tool is connected to the drive via Ethernet or USB interface.

Communication with all major automation networks
Fieldbus adapters enable connectivity with all major automation networks.

Flexible product configurations
Drives are built to order with a wide range of options. Ready made cabinets with or without transformer are avaiable up to 20 MW.

Extended connectivity
In addition to the standard interfaces, the drive has three built-in slots for additional input/output extension modules and speed feedback interfaces.

What does all-compatible
mean for you?
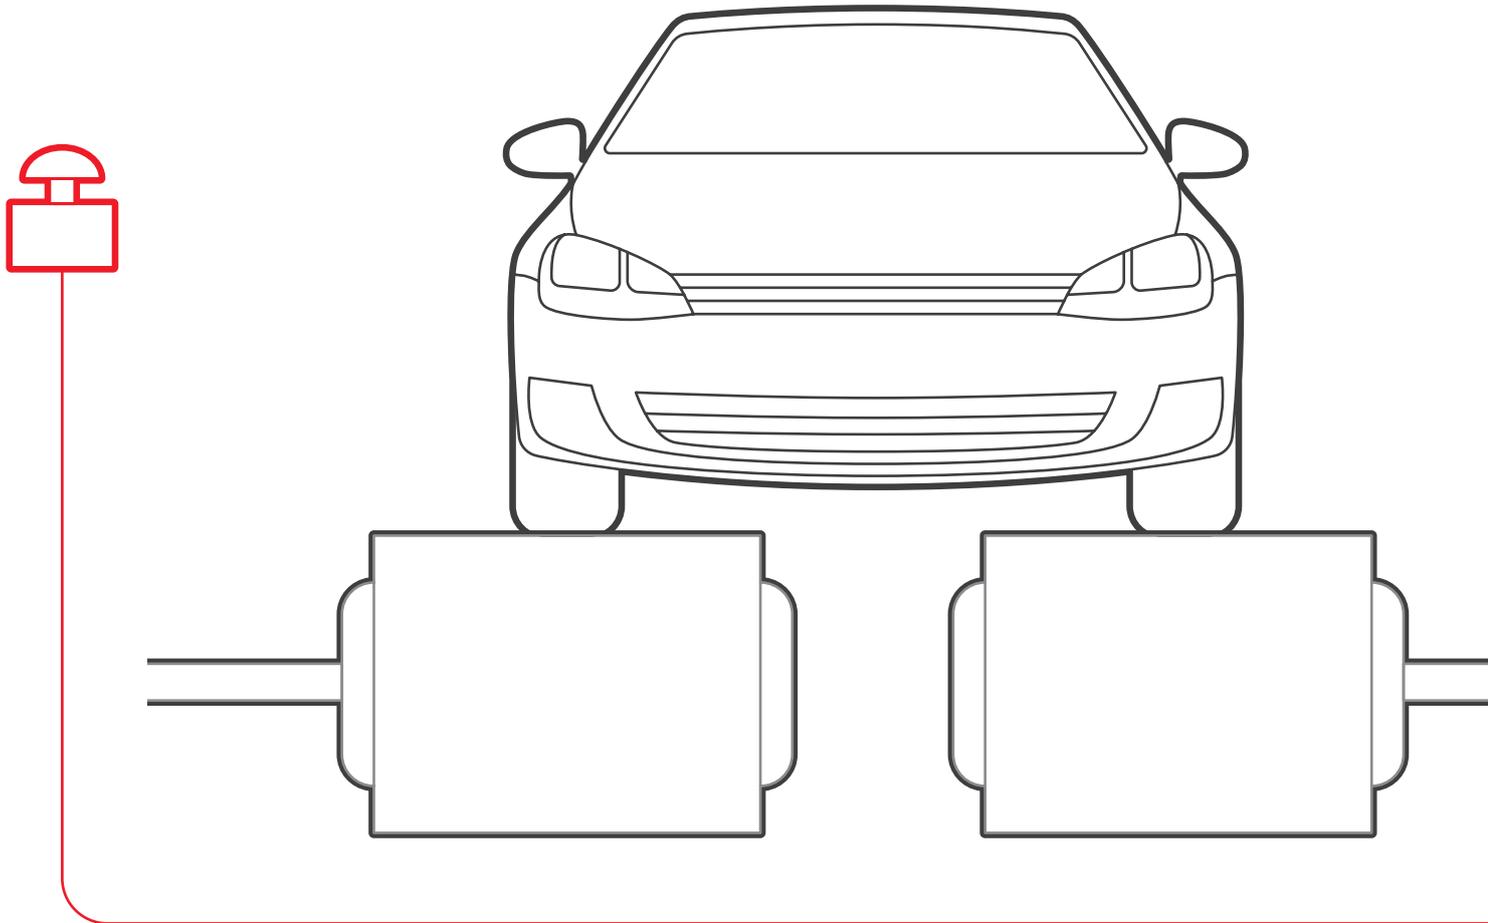

Business all-compatible

The all-compatible drives are not just equipment – they are part of your business strategy. Providing better control over your processes, our drives mean lower energy consumption, improved productivity, flexibility and ease of use. In addition to drives, we offer a wide range of products and services to support your business. With offices in over 90 countries and a global technical partner network, we are in a good position to offer technical advice and local support, worldwide.

Process all-compatible
The drives are compatible with all kinds of processes. They control virtually any type of DC motor, provide extensive input / output connectivity and support all major fieldbus protocols. The drives cover a wide voltage and power range. Control performance is scalable from basic to demanding applications. The flexibility and scalability of the drives enable one drive platform to control virtually any application or process, making your drive selection easy.

Environment all-compatible
There is increased demand for industries to reduce their impact on the environment. Our drives can help you reduce energy consumption in a wide range of applications. Keeping and upgrading of existing equipment reduces the impact a modernization of a production line would have in terms of use of materials and energy for production and transport of new equipment.
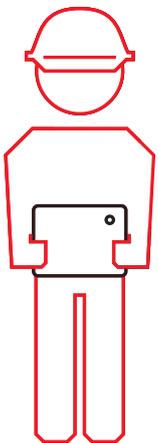

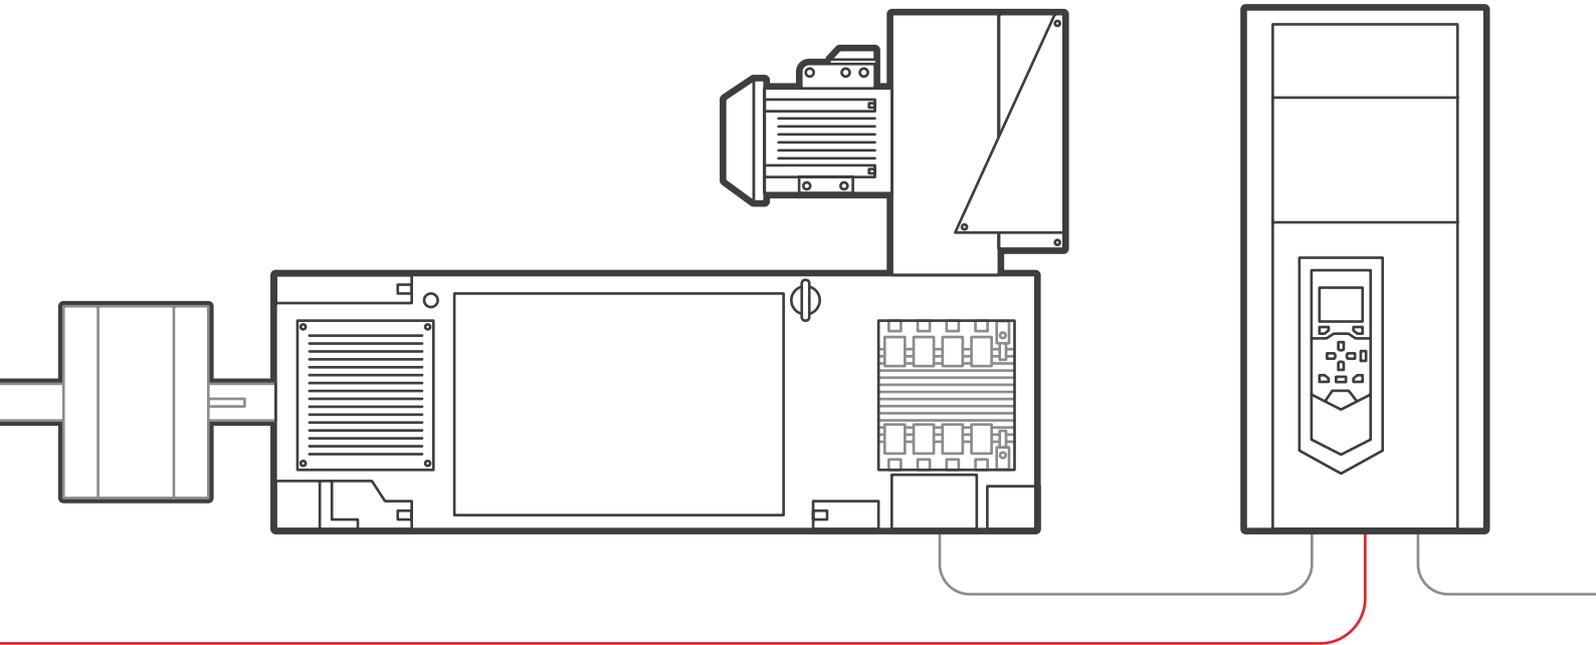

Human all-compatible
All our drives share easy-to-use interfaces, saving you time during drive commissioning and maintenance. When you have learned it once, you can use it with all the drives in our all-compatible drives portfolio.

The control panel supports multiple different languages. With the PC tool, you get extensive drive monitoring capabilities and quick access to the drive settings. Integrated and certified safety features provide safety for machine operators.

To further improve the user experience, we have developed mobile apps that can be utilized in interacting with the drive. These apps give you an easy graphical interface for management, maintenance and service of your drives.

Cost and time savings
with Drive-based functional safety

DCS880 drives have a safe torque off (STO) function built in as a standard. With our DCS880 drive, you can achieve SIL3 /PLe safety level with certified safety functions modules. The safety module is easy to integrate inside the drive and offers you several safety functions. Integration with automation systems is quick and reliable using PROFIsafe connectivity.

STO built in
The SIL3 /PLe certified Safe Torque OFF (STO) functions prevents the motor from generating torque. This allows machine interaction to be performed without complete shut down of the machine.

Scalable safety with PROFIsafe and safety PLC
The safety functionality can be scaled to your needs. From a safety module integrated into a single relay to a complete safety system with a PROFIsafe and a safety PLC, eg, AC500-S.

Safely limited speed
The SIL3 /PLe certified safely-limited speed (SLS) function prevents the motor from exceeding a defined speed limit. This allows machine interaction to be performed at a safe speed without stopping the process.

TÜV-certified safety design tool
Functional safety design tool (FSDT-01) is used for machinery safety. It helps to increase the safety of users in the vicinity of machines. You can perform functional safety modeling, design, calculations and verification for machine functional safety.
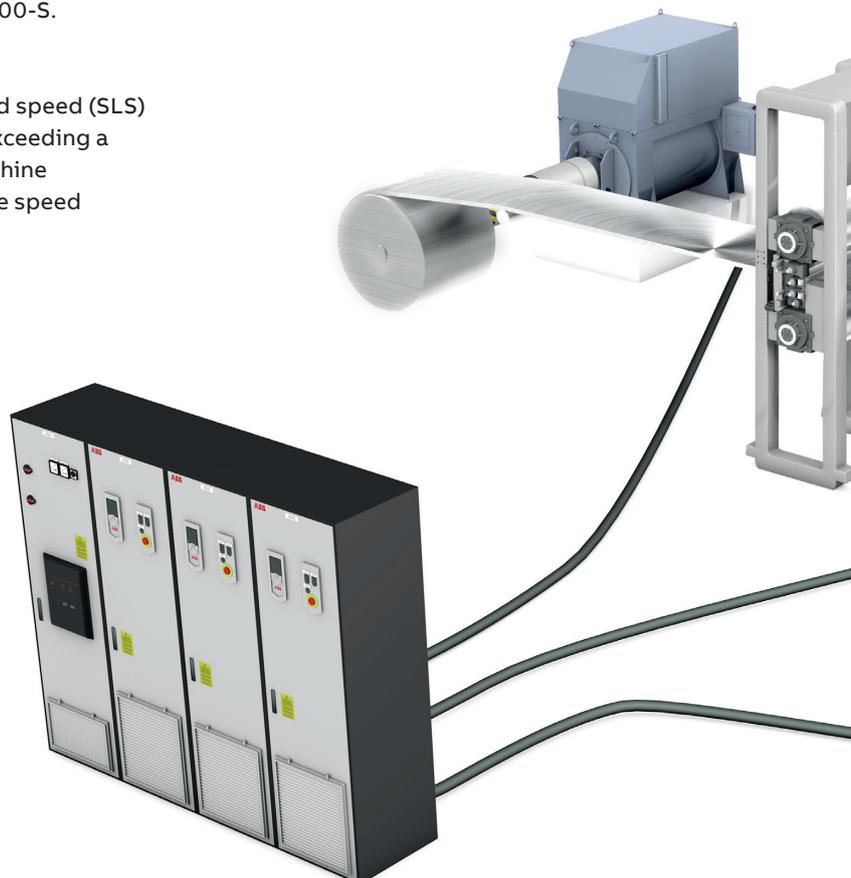

Flexibility to serve every application
with Drive-based adaptive and application programming

The built in PLC capability of the DCS880 provides you a possibility to customize the drive for your application without the cost of extra hardware. As programming is based on the IEC 61131-3 standard used in AC500 PLCs and by many other PLC vendors, you do not need to re-train your staff. By decentralizing your machine control closer to the process, you achieve better control performance.

Adaptive programming
Adaptive programming is ideal for creating simple control programs for various applications. By graphical drag and drop programming it does not require expertise in programming and is offered as standard in all-compatible drives.

Application programming
Application programming makes it possible for system integrators and machine builders to integrate their desired functionality and know-how directly into the drive.
Drive application programming is accomplished with the ABB Drive Application Builder tool and is based on the well-known IEC 61131-3 standard. This standard makes it possible to start program development with minimal training and to transfer customized programs to other platforms.

Automation Builder
Automation Builder is an integrated software suite for automation engineering, which makes programming industry devices such as PLCs, robots and human-machine interfaces (HMIs) easy using one integrated engineering suite. Automation Builder is used both for engineering devices and entire automation projects.
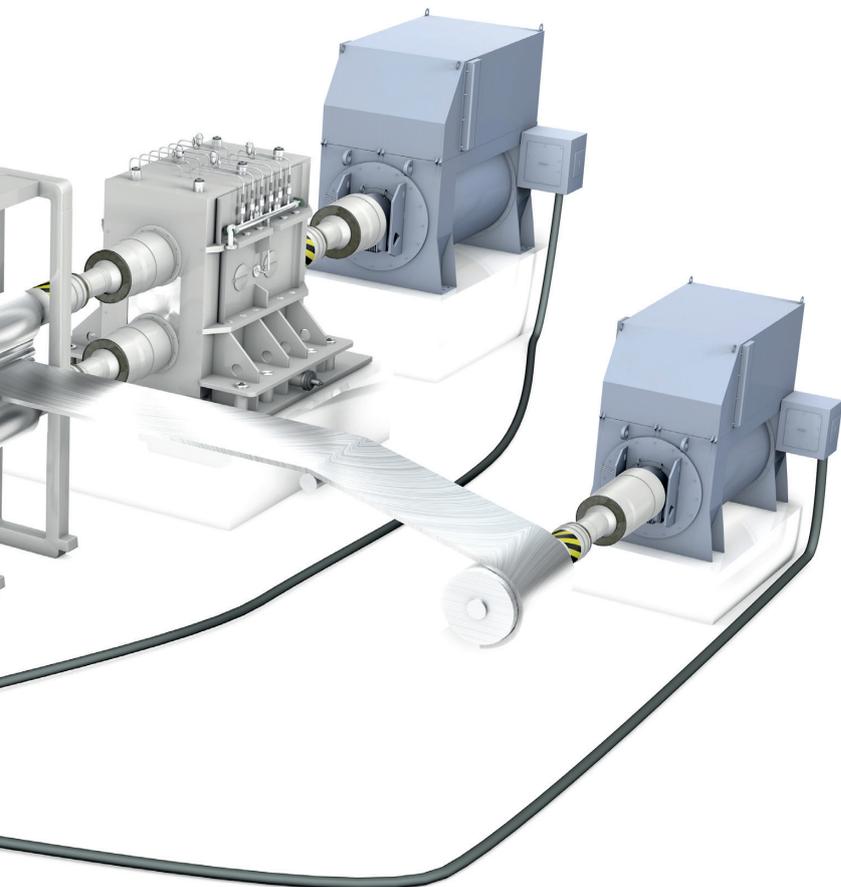

Type code

Type code: | DCS880 | - | S01 | - | 0680 | - | 04 X 0 | + | L508 |

Product family
DCS880 = DC converter

Product type
S0 = Standard converter module
R0 = Rebuild kit
A0 = Enclosed converter
E0 = Panel solution

Bridge type
1 = Single bridge (2-Q)
2 = 2 anti-parallel bridges (4-Q)

Rated DC current
0680 = e.g. 680 A_{DC} (IP00)

Rated AC voltage
04 = 100 ... 415 V_{AC}
05 = 100 ... 525 V_{AC}
06 = 270 ... 600 V_{AC}
07 = 315 ... 690 V_{AC}
08 = 360 ... 800 V_{AC}
10 = 450 ... 990 V_{AC}
12 = 540 ... 1190 V_{AC}

Power connection (H8)
X = Standard (H1 ... H7)
R = Right side (H8)
L = Left side (H8)

Revision Code
0 = 1st generation

Plug-in options
External options

Environmental conditions

System connection

Voltage, 3-phase:	100 to 1000 V acc. to IEC 60038
Voltage deviation:	±10 % continuous; ±15 % short-time *
Rated frequency:	50 Hz or 60 Hz
Static frequency deviation:	50 Hz ± 2 %; 60 Hz ± 2 %
Dynamic: frequency range:	50 Hz: ± 5 Hz; 60 Hz: ± 5 Hz
df/dt:	17 % / s

* = 0.5 to 30 cycles.

Please note: Special consideration must be taken for voltage deviation in regenerative mode.

Degree of protection

Converter module and options (line chokes, fuse holder, field supply unit, etc.):	IP 00
Enclosed converters:	IP 21/42/54

Paint finish

Converter module:	Body RAL 7012; Cover RAL 9017 & RAL 9002

Sound pressure level

Size	Sound pressure level L$_P$ (1 m distance)	Vibrations
	as module	as module
H1	55 dBA	
H2	55 dBA	
H3	60 dBA	3 mm, 2 ... 9 Hz
		1 g, 9 ... 200 Hz
H4	66 ... 70 dBA, depending on fan	
H5	75 dBA	
H6	73 dBA	0.3 mm, 2 ... 9 Hz
H7	75 dBA	0.1 g, 9 ... 200 Hz
H8	82 dBA	

UK Legislation - UKCA

In UK the system components fulfil the following regulations.

DCS880-S01/S02 modules sizes H1 ... H8

Electrical Equipment (Safety) Regulations	2016 UK Safety
Electromagnetic Compatibility Regulations	2016 UK EMC
Supply of Machinery (Safety) Regulations	2008 UK Machinery
Restriction of the Use of Certain Hazardous Substances Regulations	2012 UK RoHS

Environmental limit values

Permissible cooling air temperat.	
• at converter module air inlet:	0 to +55°C
with rated DC current:	0 to +40°C
with different DC current:	+30 to +55°C
	(depending on altitude / cooling air temp.)
• Options:	0 to +40°C
Relative humidity (at 5 ... +40°C):	5 to 95 %, no condensation
Relative humidity (at 0 ... +5°C):	5 to 50 %, no condensation
Change of the ambient temp.:	< 0.5°C / minute
Storage temperature:	-40 to +55°C
Transport temperature:	-40 to +70°C
Pollution degree (IEC 60664-1, IEC 60439-1):	2
Site elevation	
<1000 m above M.S.L.:	100 %, without current reduction
>1000 m above M.S.L.:	with current reduction

North American Standards

In North America the system components fulfil the requirements of the tables below.

DCS880-S01/S02 module sizes H1 ... H8

	US	Canada
Standard	UL 61800-5-1	CAN/CSA 22.2 No. 274-17
Certificate no.	U8 045204 0008 Rev. 00 (TÜV-SÜD)	

Field exciter DCF803/804-0035, -0050, -0060

	US	Canada
Standard	UL 61800-5-1	CAN/CSA 22.2 No. 274-17
Certificate no.	U8V 045204 00011 Rev. 00 (TÜV-SÜD)	
Max. AC voltage	500 V$_{AC}$	500 V$_{AC}$

Regulatory compliance

The converter module and enclosed converter components are designed for use in industrial environments. In EEA countries, the components fulfil the requirements of the EU directives, see table below.

European union directive	Manufacturer's assurance	Harmonized standards Converter module
Machinery Directive		
2006/42/EU	Declaration of Conformity	EN 61800-5-2:2017

DCS880 power converter modules

General

The power converter modules DCS880-S have the protection class IP00 and are to be mounted in a cubicle or finger protected area. There are different sizes (H1 - H8), graduated in terms of current and voltage ranges.

All units are equipped with the DCS880 Control Panel. It can be snapped into place on the power converter module or installed in the switchgear cubicle door by means of a mounting kit.

Accessories such as external fuses, line reactors etc. are also available, to complete the drive system.

All converter modules up to 525 V and 1000 A (H1 … H4) are equipped with field exciters.

The power section of the converters is available as single (2-Q) bridge or double (4-Q) bridge. 4-Q drives are required for regenerative breaking. 4-Q drives can be built by:

- Double (4-Q) armature bridge or
- Single (2-Q) armature bridge plus a double (4-Q) field converter bridge

The bridge type has an influence on the maximum output voltage of the converter. See table below.

Reference variables

The voltage characteristics are shown in the table beside. The DC voltage characteristics have been calculated using the following assumptions:

- U_{VN} = rated input terminal voltage, 3-phase
- Voltage tolerance ±10 %
- Internal voltage drop approx. 1 %
- If a deviation or a voltage drop has to be taken into consideration in compliance with IEC and VDE standards, the output voltage or the output current must be reduced by the actual factor according to the table on the right.

If armature voltages higher than recommended are requested, please check carefully, whether your system is still working under safe conditions. The maximum output voltage of a 4-Q drive can be increased up to the level of U_{dmax} 2-Q. Thus the torque reversal from motoring mode to generating mode increases up to 300 ms. This lowers the dynamics of the drive and is only recommended for non-dynamic applications (e.g. E-Stop function).

System connection voltage	DC voltage (recommended)		Ideal DC voltage without load	Recommended DCS880 voltage class
U_{VN} [V]	$U_{dmax\ 2\text{-}Q}$ [V]	$U_{dmax\ 4\text{-}Q}$ [V]	U_{di0} [V]

relais

① For H7 and H8 see SDCS-OPL-H01.   SA_880_005_DCS_d.ai

The DCS880 single drives offers a wide range of standard interfaces. In addition the drive has three option slots that can be used for extensions including fieldbus adapter modules, input/output extension modules, feedback modules and a safety functions module.

Standard interface	Description
3 analog inputs (XAI)	Current input: –20 … 20 mA, Voltage input: –10 … 10 V, Resolution: 15 bit + sign bit
2 analog outputs (XAO)	0 … 20 mA, 0 … 10 V
6 digital inputs (XDI)	Input type: Source / Sink (DI1 … DI5), Source (DI6) DI6 (XDI:6) can alternatively be used as an input for a PTC thermistor.
Digital input interlock (DIIL)	Input type: Source / Sink
2 digital inputs/outputs (XDIO)	As input: 24 V logic level As output: Total output current from 24 V_{DC} is limited to 200 mA Can be set as pulse train input and output
3 relay outputs (XRO1, XRO2, XRO3)	250 V_{AC} / 30 V_{DC}, 2 A
Safe torque off (XSTO)	For the drive to start, both connections must be closed
Main contactor (XSMC)	Main contactor control, fault shut-down circuit
Drive-to-drive link (XD2D)	Physical layer: EIA-485
Built-in Modbus	Physical layer: EIA-485
Assistant control panel/	Connector: RJ-45
PC tool connection	USB via control panel
Encoder	5 V / 24 V, Differential or single ended
Tacho	±8 … 270 V_{DC}

Interface option modules

—

Input/output extension modules for increased connectivity

Standard input and output can be extended by using optional analog and digital input/output extension modules. The modules are easily installed in the extension slots located on the control unit.

Analog and digital input/output extension modules

Option	Option code	Connections
FIO-01	+L501	4×DIO (24 V), 2×RO
FIO-11	+L500	3×AI (mA/V), 1×AO (mA), 2×DIO
FAIO-01	+L525	2×AI(mA/V), 2×AO(mA)
FDIO-01	+L526	3xDI (24 V, 115 V, 230 V), 2xRO

—

Speed feedback interfaces for precise process control

DCS880 drives can be connected to various feedback devices, such as HTL pulse encoder, TTL pulse encoder, absolute encoder and resolver. The optional feedback module is installed in the option slot on the drive. It is possible to use two feedback modules at the same time, either of the same type or different type.

Feedback interface modules

Option	Option code	Connections
FEN-01	+L517	2 inputs (TTL pulse encoder), 1 output
FEN-21	+L516	2 inputs (Resolver, TTL pulse encoder), 1 output
FEN-31	+L502	1 input (HTL pulse encoder), 1 output

—

I/O option extension adapter

For additional I/O option slots the FEA-03 is suitable for this use. An analog and digital input/output extension and speed feedback interface can be installed on the FEA-03. Two extension modules can be installed on each I/O extension slot. The connection to the control unit is via an fiber optic link. The adapter can be mounted on an DIN rail (35 x 7.5 mm). Extension adapter requires FDCO option module

I/O extension adapter

Option	Description	Ordering code
FEA-03	2 x F-type option extension slots	3ADT200067R0001

Communication option modules

DDCS communication option modules

The FDCO-0X optical DDCS communication options are add-on modules on the DCS880 industrial drives control unit. The modules include connectors for two fiber optic DDCS channels. The FDCO-01 module makes it possible to perform master-follower and AC800 M communication.

DDCS communication option modules

Option	Option code	Connections
FDCO-01	+L503	Optical DDCS (10 Mbd/10 Mbd)

DCSLink communication option modules

The SCDC-DSL-H1x DCSLink communication options are add-on modules on the DCS880 industrial drives control unit. The option include connectors for DCSLink communication as well as up to 4 fiber optics channels for optical power link communication.
DCSLink is used to control external field exciters and also used for 12- and higher pulse operation. The optical power link communications enable control of a power unit size H7 and H8 as well as parallel operation of up to four power units.

DCSLink communication option modules

Option	Option code	Connections
SDCS-DSL-H10	+S521	1 DCSLink channel, 0 channels optical power link
SDCS-DSL-H12		1 DCSLink channel, 2 channels optical power link
SDCS-DSL-H14	+S523	1 DCSLink channel, 4 channels optical power link
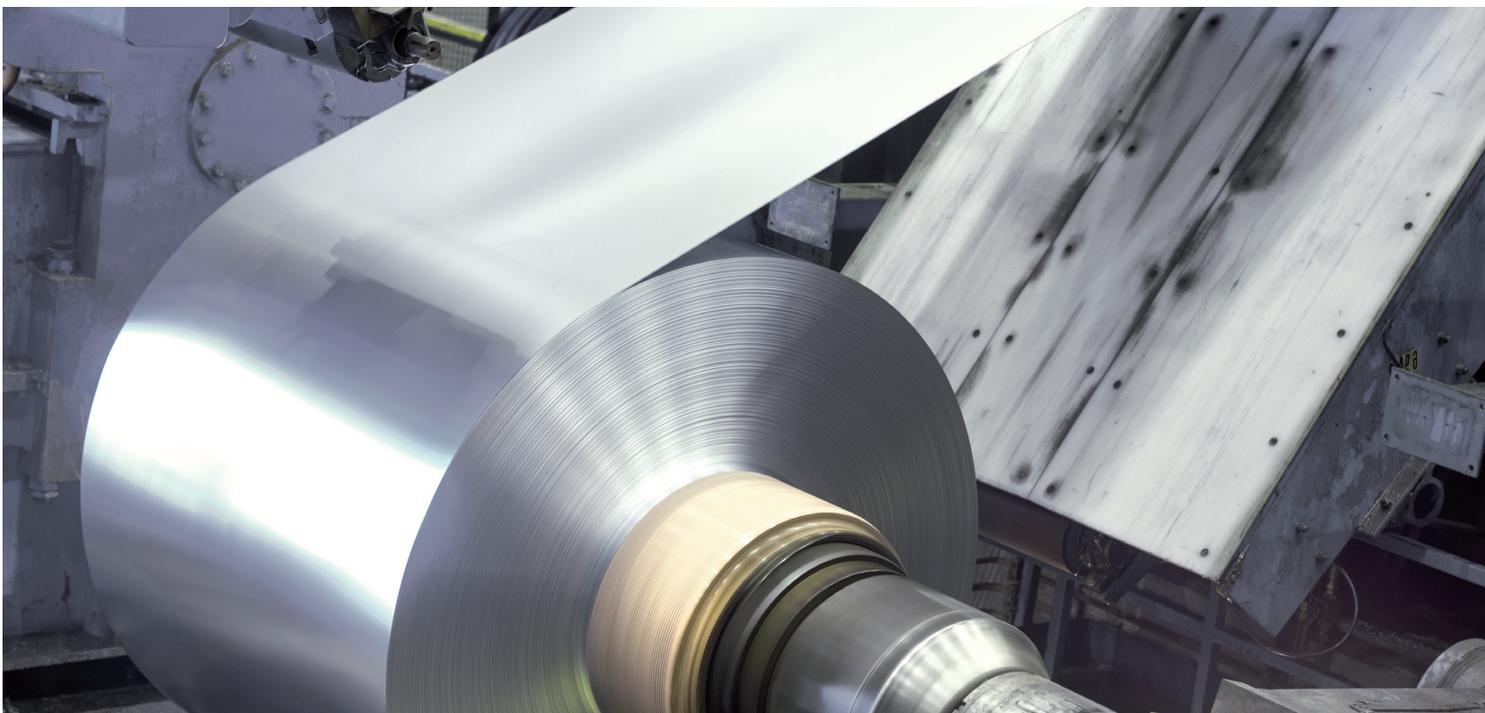

Flexible connectivity
to automation networks

01

—
01 F-type fieldbus
adapters
—
02 NETA-21

Our fieldbus adapter modules enable communication between drives, systems, devices and software. Our industrial drives are compatible with a wide range of fieldbus protocols.
The plug-in fieldbus adapter module can easily be mounted inside the drive. Other benefits include reduced wiring costs when compared with traditional input/output connections. Fieldbus systems are also less complex than conventional systems, resulting in less overall maintenance.

Multiple fieldbus connections for flexible control
DCS880 supports two fieldbus connections simultaneously. The user has flexibility of choice for control modes by being able to select one protocol for control and one for monitoring. Also redundant fieldbus connection is possible.

Drive monitoring
A set of drive parameters and/or actual signals, such as torque, speed, current, etc., can be selected for cyclic data transfer, providing fast data access.

Drive diagnostics
Accurate and reliable diagnostic information can be obtained through the alarm, limit and fault words.

Drive parameter handling
The Ethernet fieldbus adapter module allows users to build an Ethernet network for drive monitoring and diagnostic and parameter handling purposes.

Remote monitoring access worldwide
The remote monitoring tool, NETA-21, gives easy access to the drive via the Internet or local Ethernet network. NETA-21 comes with a built-in web server. Through the interface the user can configure drive parameters, monitor drive log data and follow up load levels, run time and I/O data. The user can access the remote monitoring tool web page using 3G modem from anywhere with a standard PC, tablet or a mobile phone.
The remote monitoring tool allows personnel to monitor or perform maintenance for unmanned or manned applications and enables access for multiple users from several locations.

—
02

Enhanced monitoring functions
Values of process variables or drives actual values can be logged to NETA-21´s SD memory card or sent forward to a centralized database.

Cabling
Substituting the large amount of conventional drive control cabling and wiring with a single cable reduces costs and increases system reliability and flexibility.

Design
The use of fieldbus control reduces engineering time at installation due to the modular structure of the hardware and firmware and the simplicity of the connections to the drives.

Commissioning and assembly
The modular machine configuration allows pre-commissioning of single machine sections and provides easy and fast assembly of the complete installation.

Universal communication with ABB fieldbus adapters
The DCS880 supports the following fieldbus protocols:

Fieldbus adapter modules

Option	Option code	Fieldbus protocol
FPBA-01	+K454	PROFIBUS DP, DPV0/DPV1
FCAN-01	+K457	CANopen®
FDNA-01	+K451	DeviceNet™
FENA-21	+K475	2 port EtherNet/IP™, Modbus TCP, PROFINET IO, PROFIsafe [1]
FECA-01	+K469	EtherCAT®
FSCA-01	+K458	Modbus RTU
FEPL-02	+K470	PowerLink
FEIP-21	+K490	EtherNet/IP™
FMBT-21	+K491	Modbus TCP
FPNO-21	+K492	PROFINET IO
FSPS-21	+Q986	PROFIsafe

1) For the PROFIsafe to work the PROFINET fieldbus adapter module (FENA-21) and the safety functions module are required.

Cost and time savings
with drive-based functional safety

—
03 FSPS-21

—
04 FSO-21, FSE-31

Safety functions
DCS880 converters offer safe torque off (STO)
built in as a standard.

Scalable safety with PROFIsafe and safety PLC
The safety functionality can be scaled to your
needs. From STO wired to an emergency push
button, to a complete safety system with
PROFIsafe and a safety PLC, e.g. the AC500-S.

FSPS-21 PROFIsafe safety option module
The FSPS-21 PROFIsafe safety option module
enables a safe ethernet connection between
drive and safety PLC and provides two safety
functions which are activated via PROFIsafe over
PROFINET IO.

—
03

Available safety functionality
The following safety functions are supported
(which achieve a safety level up to SIL3 / PL e
(Cat. 3)):
• Safe torque off (STO).
  The STO function corresponds to an
  uncontrolled stop in accordance with stop
  category 0 of EN 60204-1. Torque is removed
  safely from the motor shaft and permits safe
  maintenance and safe operation of the
  machinery.
• Safe Stop 1 (SS1-t).
  The function SS1-t stops the motor by ramping
  down the motor speed to zero (stop category 1)
  and activates safely STO after SS1-t monitored
  time limit has elapsed regardless of the motor
  speed.

The drives functional safety is designed in
accordance with EN/IEC 61800-5-2 and complies
with the requirements of the European Union
Machinery Directive (2006/42/EC).

FSE-31 pulse encoder interface module
The FSE-31 pulse encoder interface module is
used in safety systems together with the FSO-21
safety functions module. The safety pulse
encoder delivers pulses to the FSE-31 module
which delivers safe speed, direction and position
information to the FSO-21 module.

Integrated safety simplifies configuration

Easy configuration
Configuring the safety functions module is easy
thanks to the graphical user interface of the Drive
composer pro PCtool.

TÜV-certified safety design tool
The FSDT-01 functional design safety design tool
can be used to design complete safety circuits.
It helps to increase the safety of users in the
vicinity of machines. You can perform functional
safety modeling, design, calculations and
verification for machine functional safety.

Common features
throughout the whole DCS880 product family

Standard DCS880 features

DCS880 basic firmware
DCS880 firmware includes the basic function of speed control, armature current, field current and motor voltage. The flexible design for command location enables field bus control or master-follower control or control from hardware signals as well as a mixed structure. The design of drive logic enables a drive reaction defined by Profibus standard but can also configured to adapt classic command structures.

Integrated safe torque off (STO)
• Safe torque off for implementing safe machinery
• SIL 3, PL e

Extensive I/O connections
• The DCS880 features extensive I/O connections for flexible configuration in various applications
• Colored terminals for easy configuration

Assistant control panel and primary settings
• The ACS-AP-I assistant control panel speaks multiple different languages
• USB interface for PC and tool connection
• Help button for problem-solving

Commissioning Assistants
DCS880 includes a eight step assistant to set up the drive. The assistant is available via control panel and Drive Composer Pro PC-tool.

Following comissioning steps are covered:
• Name plate data
• Standard I/O
• Field current controller with auto tuning
• Armature current controller with auto tuning
• First motor turning
• Speed feedback selection with autodetect of speed feedback device
• Speed controller with auto tuning
• Field weakening with auto tuning

Shared features of the ABB all-compatible drives portfolio

Adaptive programming
• DCS880 firmware includes an easy-to-use and visual adaptive programming feature.
• Adaptive programming can be used to add logical functions and conditions for process fine-tuning.

Same PC tools for ABB all-compatible drives
• Free Drive Composer entry available at www.abb.com.
• Same parameter structure makes the all-compatible platform easy to use.

Removable memory unit
The removable memory unit stores the firmware that includes user settings, parameter settings and motor data. Situated on the control unit, the memory unit can easily be removed for maintenance, update or replacement purposes.

Connectivity
• The DCS880 supports F-series fieldbus adapters used in the ABB all-compatible platform.
• Mobile phone connectivity via the optional Bluetooth assistant control panel.

Standard DCS880 drives software
with versatile features

Save commissioning and learning time with the assistant control panel's clear and intuitive user interface and different assistants.

Support for 12-pulse systems to reduce line harmonics, reduce motor noise level, enlarge output current or voltage of the converter system.

Same product for non-motoric applications enables to cover applications such as: water treatment, chlorination, electrolysis, galvanization, magnet, arc furnace and testing.

Adapt and customize using flexible IEC61131-3 programming, making it easy to adapt to any application need.

Built-in Drive-to-Drink link (D2D) to cover all the master follower applications where motors run with the same speed / torque connected to the same shaft or gearbox.

Scale up and customize the drive to your application's requirements with flexible parameter pointers or adaptive programming.

Protect and supervise your motor by powerful supervision functions such as stall protection, thermistor motor protection, armature current ripple, minimum field current and many more.

Analyze and resolve issues with the control panel's diagnostics menu. You can quickly analyze why the drive is performing as it is; running, stopped or running at the present speed.
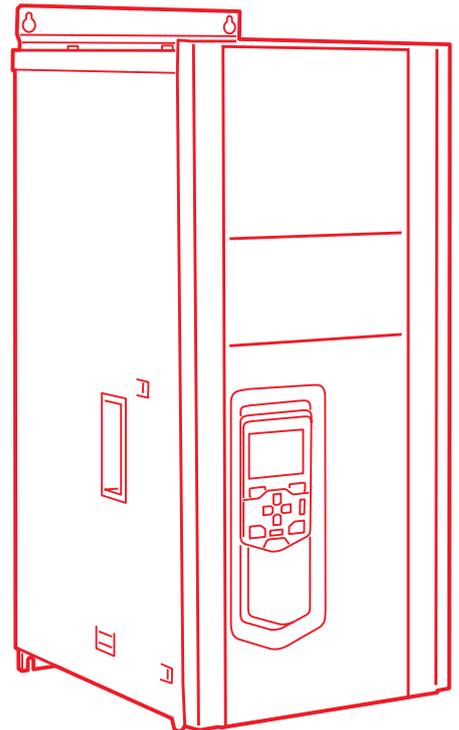

The all-compatible DCS880 series
The first choice for any application

Replacement of existing DC Drives
In many installations DC drives are in reliable operation since decades. While the DC motors can often be operated for many more years, the DC drive however might experience lack of support and spare parts and maybe even reliability.
A replacement of the old DC drive with a DCS880 can extend the lifetime of the equipment by some more decades at very low costs. Additionally it can easily get upgraded to the newest safety requirements by using STO without the need of adding or replacing breakers or contactors. Since existing drive installations from the past decades may comprise many different configurations, the DCS880 is prepared for any challenges with its unique flexibility and programmability.

Ships and offshore
On ships and offshore outstanding robustness and reliability is a must when driving winches, drills, mud pumps or propulsions.

Test equipment
For testing powertrains, materials or any rotating equipment customers can rely on the DCS880's high accuracy speed and torque control, its high dynamic control and the wide field weakening range.

Plastic and rubber
When used in extruders, mixers, kneaders, or calendars the DCS880 convinces with high starting torque and overloadability as well as various protecting functions to protect motor and equipment.

Metals
Rolling or tube mills often combine very high motor power with extremely fast load changes. Consequently, the DCS880 offers both – a proven high dynamic torque control and flexible high power configurations up to 20,000 A /1,500 V_{DC} in 6-pulse, 12-pulse or 24-pulse with high overloadability. Other applications in metals fabrication like roller tables, wire drawing or processing lines benefit from safe operation with STO and the DCS880's robustness in harsh environment.

Pulp and paper
With the DCS880 replacements of old DC drives in an existing paper machine can be executed in very short downtimes as low as eight hours. And thanks to the integrated STO the machine can be upgraded to the newest safety requirements without installing or replacing additional contactors or breakers.

Food and beverage
Sugar centrifuges or meat processing equipment benefit from the compact size - even with regenerative braking - and low losses combined with high realibilty.

Drive programming

Application programming based on IEC 61131-3

Drive Application Builder (DAB) makes it possible for system integrators and machine builders to integrate their desired functionality and know-how directly into DCS880 drives. This is possible as DCS880 drives come with programming capability embedded inside the drive. Designing an application program in the drive makes the end user application run more efficiently, even without a separate programmable controller. It also brings higher end-product quality and requires less need for installation space and wiring.

Drive Application Builder lets you extend the standard functionality of parameter functions for DCS880 drives. This makes the DCS880 drives very flexible to meet exact requirements set for end user applications. The library management functionality in DAB shortens engineering time as reuse of existing program code is possible. Additional features include the ability to select and use one of five different programming languages, effective program debugging and user password protection.
The drive application programming license should be ordered together with the drive.

Drive application programmability

Option	Option code
License key	+S551

For more and advanced functions the Drive Application Builderr tools must be ordered separately. For further information please contact your local ABB.

Human Machine Interface (HMI) **PLC, AC500** **LV DC drives** **Industrial application**

Drive Application Builder
• System configuration and diagnostic
• IEC 61131-3 programming
• Common project data handling
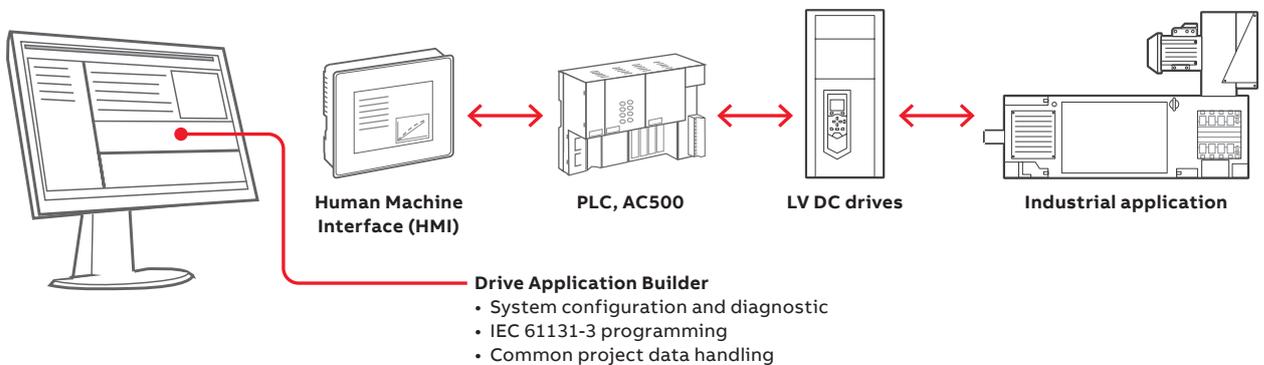

Adaptive programming

Adaptive programming is used to customize the operation of a drive in case the drive parameter setting is not sufficient. The adaptive program is built with standard function blocks included in the drive firmware elements.

LV DC drives **Industrial application**

Drive Composer
• Graphical programming
• Predefined blocks
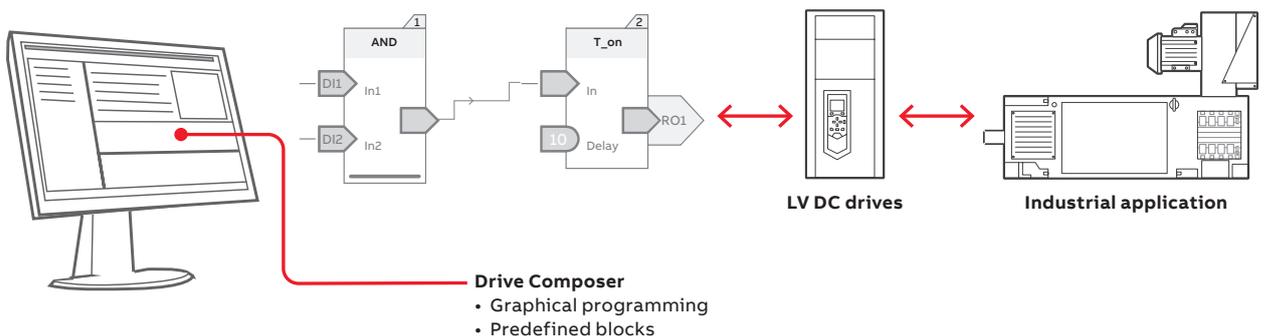

Intuitive human-machine interface

The assistant control panel features intuitive use and easy navigation. High resolution display enables visual guidance. The panel saves on commissioning and learning time by means of different assistants, making the drive simple to set up and use.

It is possible to organize parameters in different ways and store essential parameters for different configurations for any specialized application needed. The menus and messages can be customized for specific terminology so that each application can be set up and configured to its optimum performance. This makes the drive easier to use with information that is familiar to users. With the panel's text editor, users can also add information, customize text and label the drive. Powerful backup and restore functions are supported as well as different language versions. The help key provides context sensitive guidance. Faults or warnings can be resolved quickly since the help key provides troubleshooting instructions.

One control panel can be connected to several drives via DPI-H01 simultaneously using the panel network feature. The user can also select the drive to operate in the panel network. The PC tool can be easily connected to the drive through the USB connector on the control panel. There are also control panel mounting platforms, DPMP-01 and DPMP-02, available for cabinet door mounting with IP55 or IP65 protection class.

Assistant control panel

Option	Option code	Description
ACS-AP-I	standard	built-in
no ACS-AP-I	0J404	no panel
ACS-AP-W	+J429	Bluetooth panel

PC tool for easy startup and maintenance

The Drive composer PC tool offers fast and harmonized setup, commissioning and monitoring for the whole drives portfolio. The free version of the tool provides startup and maintenance capabilities, while the professional version provides additional features such as custom parameter windows, control diagrams of the drive's configuration and safety settings.

The Drive composer tool is connected to the drive using an Ethernet connection or through the USB connection on the assistant control panel. All drive information such as parameter loggers, faults, backups and event lists are gathered into a support diagnostics file with a single mouse click. This provides faster fault tracking, shortens downtime and minimizes operational and maintenance costs.

Drive composer pro
Drive composer pro provides basic functionality, including parameter settings, downloading and uploading files and search parameters. Advanced features such as graphical control diagrams and various displays are also available. The control diagrams save users from browsing long lists of parameters and help to set the drive's logic quickly and easily. The tool has fast monitoring capabilities of multiple signals from several drives in a PC tool network. Full backup and restore functions are also included. Safety settings and adaptive programming programs can be configured with Drive composer pro.

Item	Description	Ordering code

External field supply

—
01 DCF803-0035

General data
- Currents from 0.3 to 520 A
- Minimum field current monitor
- Integrated external field power converter or completely separate switchgear cubicle
- single-phase or 3-phase model
- Controlled by serial communication via DCSLink

All field converters are controlled by the armature converter via a serial interface (SDCS-DSL-H1x board). This interface serves to parameterize, control and diagnose the field converter and thus provides exact control.

We recommend integrating an autotransformer in the field power converter's supply circuit to adjust the AC input voltage to the field voltage and for reducing the voltage ripple in the field circuit for single-phase operation.

Field reversal
Field reversal is basic firmware function of DCS880. Required hardware configuration is a 2-Q (single) armature bridge plus a 4-Q (double bridge) field exciter.

Field reversal offers low dynamic torque reversal which can be used for e.g. propulsion Drive to change speed direction or E-Stop function for unidirectional mills.
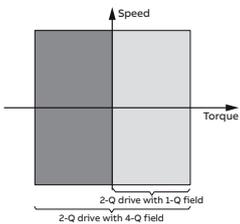

Field converter types DCF803-0035 and DCF803-0016
- Half-controlled thyristor/diode bridge (1-Q)
- Three-phase or single-phase operation
- Microprocessor control, with the electronic system being supplied by the armature circuit converter (24 V).
- Construction and components have been designed for an insulation voltage of 600 V_{AC}.
- Fast-response excitation is possible with an appropriate voltage reserve; de-excitation takes place by field time constant.
- Field Output voltage U_A (single-phase operation):

$$U_A \leq U_V * \left(\frac{100\% + TOL}{100\%} \right) * 0.9$$

TOL = tolerance of line voltage in %
U_V = Mains voltage, U_A = Field voltage

- Recommendation (single-phase operation): U_A = 0.6 to 0.8 * U_V or U_V = 1.25 to 1.7 * U_A
- Field Output voltage U_A (three-phase operation):

$$U_A \leq U_V * \left(\frac{100\% + TOL}{100\%} \right) * 1.35$$

TOL = tolerance of line voltage in %
U_V = Mains voltage, U_A = Field voltage

Note: Calculation valid also for FEX-425 internal

Single-phase field supply

DCF803-0050 and DCF803-0060
- Single-phase power stack
- Half-controlled thyristor/diode bridge (1-Q).
- Built-in line chokes.
- Microprocessor control with the control electronics being supplied separately (115 ... 230 V/1-ph).
- Construction and components have been designed for an insulation voltage of 690 V_{AC}.
- Field output voltage U_A:

$$U_A \leq U_V * \left(\frac{100\% + TOL}{100\%} \right) * 0.9$$

TOL = tolerance of line voltage in %
U_V = Line voltage, U_A = Field voltage

- Recommendation:
  U_A = 0.6 to 0.8 * U_V or U_V = 1.25 to 1.7 * U_A

DCF804-0050 and DCF804-0060
- Single-phase power stack
- Fully-controlled antiparallel thyristor bridges (4-Q)
- This unit offers field reversal as well as fast-response excitation / de-excitation.
- In the steady-state condition, the fully-controlled bridge runs in half-controlled mode so as to keep the voltage ripple as low as possible. With a quickly alternating field current, the bridge runs in fully-controlled mode.
- Same design as DCF803-0050.
- Built-in line chokes.

DCS880 exciter modules

DCS880-S01, DCS880-S02
This converter can also be used for field exciter operation, an additional overvoltage protection unit is required. It provides field currents from 20 A up to 520 A unipolar (2-Q) and bipolar (4-Q) for field reversal function.

- Field output voltage U_A respectively $U_{dmax\,2\text{-}Q}$: see table on page 13
- Recommendation:
  U_A = 0.5 to 1.1 * U_V or U_V = 0.9 to 2.0 * U_A
- The large field supply converters DCS880-S01/S02 need a separate active overvoltage protection unit DCF506 for protecting the power part against inadmissibly high voltages.
  The overvoltage protection unit DCF506 is suitable for 2-Q converters DCS880-S01 and for 4-Q converters DCS880-S02.
- DCSLink communication board +S521 required.

Fuse connections

Recommended fuse connections see tables below.

Semiconductor type F1 fuses and fuse holders for AC and DC power lines (DCS880-S01 / DCS880-S02)
The converter units are subdivided into two groups:
- Unit sizes H1, H2, H3 and H4 with rated currents up to 1000 A require external line fuses.
- In unit sizes H5, H6, H7 and H8 with rated currents of 900 A to 5200 A, the semiconductor fuses are installed internally (no additional external semiconductor fuses are needed).

The table assigns the AC fuse types to the converter types. In case the converter should be equipped with DC fuses according to the hints use the same type of fuse used on the AC side now in the plus and minus line (only for sizes H1 … H4). Blade type fuses are used for all the converters of construction type H1 … H4 except the converters (610 A, 680 A, 740 A, 820 A, 900 A, 1000 A).

High power configurations

Converters generate harmonics at the mains. To reduce it is possible to use 12-pulse configuration. Low current harmonic level (THD_cur) results in a minimum voltage distortion (THD_volt) at the PCC.

|	5th	7th	11th	13th	THD_cur
6-pulse	21 %	14 %	9 %	7 %	36 %
12-pulse	1 %	1%	6%	7 %	11 %
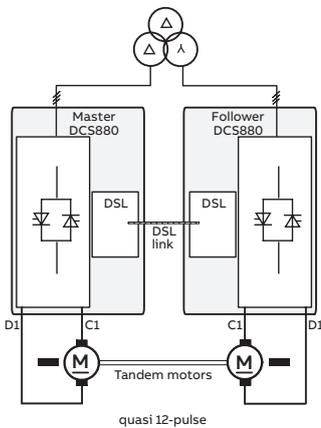

quasi 12-pulse

Quasi 12-pulse Master-Follower configuration
The converters are fed by a 12-pulse transformer with separated secondary windings whose phase positions differ by 30°el.

This configuration delivers the same advantages concerning harmonics to the network as a standard 12-pulse application (see next item), but no T-reactor is needed.

Quasi 12-pulse

Frame size	H1 ... H5	H6	H7	H8
max AC voltage	525 V	690 V	800 V	1190 V
typical DC voltage 2Q / 4Q	610 V / 545 V	800 V / 720 V	915 V / 820 V	1380 V / 1235 V

12-pulse parallel

Frame size	H1 ... H5	H6	H7	H8
max AC voltage	525 V	690 V	800 V	1190 V
typical DC voltage 2Q / 4Q	610 V / 545 V	800 V / 720 V	915 V / 820 V	1380 V / 1235 V

12-pulse serial/sequential

Frame size	H1 ... H5	H6	H7	H8
max AC voltage	not usable	2 x 350 V	2 x 600 V	2 x 725 V
typical DC voltage 2Q / 4Q	not usable	800 V / 720 V	1380 V / 1235 V	1600 V / 1500 V

12-pulse parallel
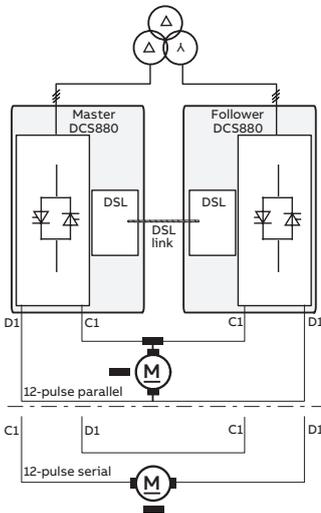

12-pulse serial

12-pulse parallel, serial or sequential configuration
12-pulse systems are used for reduced line harmonics, reduced motor noise level, enlarged output current or voltage of converter system. Only the 11th and 13th, the 23rd and 25th, the 35th a.s.o. are existing. The harmonics on the DC side are reduced too, which gives a higher efficiency. It is not possible to connect two 12-pulse systems (2 converters, T-reactor and 1 motor) to one 12-pulse transformer.

For more information, please see manual 12-pulse operation.

Non motoric, high pulse, high current low output voltage configurations.
DCS880 also supports 6-, 12-, 18- and 24-pulse configurations.

Low output voltages with optimized power factory are realized by dedicated transformers.

DC output voltage = 1.35 • converter input voltage • 0.9
AC current = DC current • 0.82
Transformer kVA = Converter input voltage • AC current • √3

12-pulse parallel (galvanic)
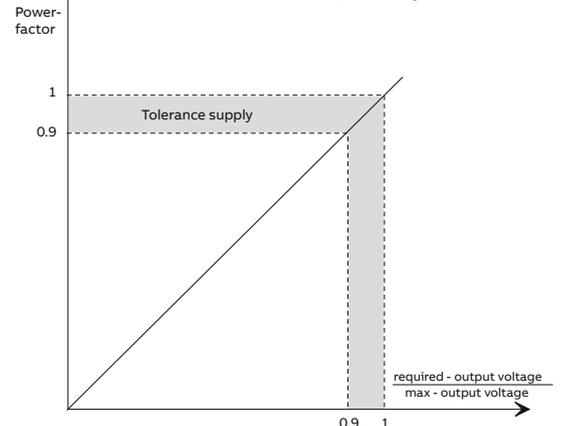

A lifetime of peak performance

You're in control of every life cycle phase of your drives. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout drives lifespan.

—

Now it's easy for you to see the exact service and maintenance available for your drives.

ABB drives life cycle phases explained:

Active	Classic	Limited	Obsolete
Full range of life cycle services and support		Limited range of life cycle services and support	Replacement and end-of-life services

	Active	Classic	Limited	Obsolete
Product	Product is in active sales and manufacturing phase.	Serial production has ceased. Product may be available for plant extensions, as a spare part or for installed base renewal.	Product is no longer available.	Product is no longer available.
Services	Full range of life cycle services is available.	Full range of life cycle services is available. Product enhancements may be available through upgrade and retrofit solutions.	Limited range of life cycle services is available. Spare parts availability is limited to available stock.	Replacement and end-of-life services are available.

Keeping you informed
We notify you every step of the way using life cycle status statements and announcements.

Your benefit is clear information about your drives' status and precise services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

Step 1
Life Cycle Status Announcement
Provides early information about the upcoming life cycle phase change and how it affects the availability of services.

Step 2
Life Cycle Status Statement
Provides information about the drive's current life cycle status, availability of product and services, life cycle plan and recommended actions.

Services to match your needs

Your service needs depend on your operation, life cycle of your equipment and business priorities. We have identified our customers' four most common needs and defined service options to satisfy them. What is your choice to keep your drives at peak performance?

Is rapid response a key consideration?

If your drives require immediate action, our global network is at your service.

Example services include:
- Technical Support
- On-site Repair
- Remote Support
- Response time agreements
- Training

Is uptime your priority?

Keep your drives running with precisely planned and executed maintenance.

Example services include:
- Life Cycle Assessment
- Installation and Commissioning
- Spare Parts
- Preventive Maintenance
- Reconditioning
- ABB Drive Care agreement
- Drive Exchange
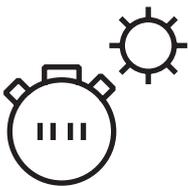

Rapid response

Operational efficiency
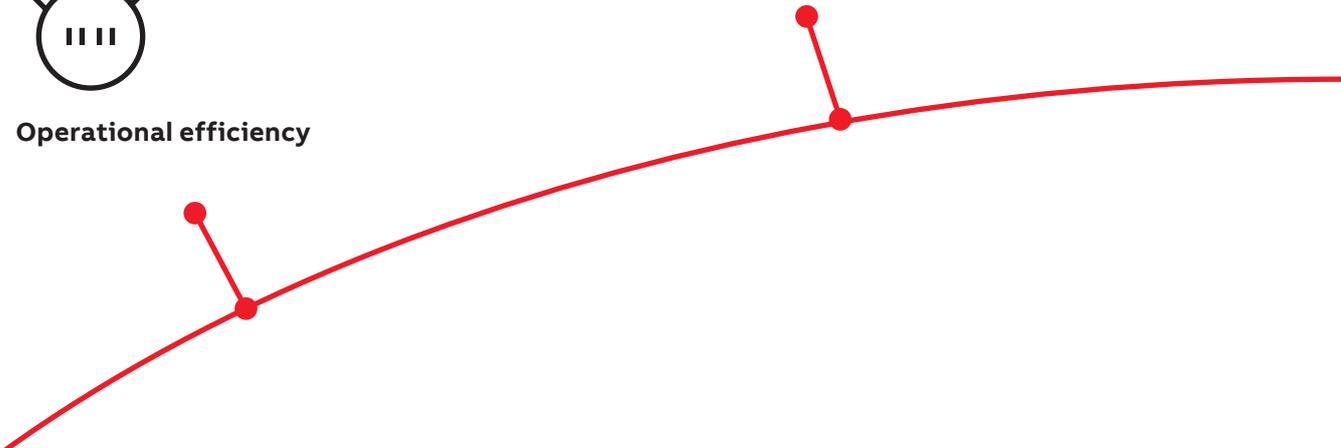

Drives service
Your choice, your future

The future of your drives depends on the service you choose.
Whatever you choose, it should be a well-informed decision. No guesswork. We have the expertise and experience to help you find and implement the right service for your drive equipment. You can start by asking yourself these two critical questions:

- Why should my drive be serviced?
- What would my optimal service options be?

From here, you have our guidance and full support along the course you take, throughout the entire lifetime of your drives.

Your choice, your business efficiency
ABB Drive Care agreement lets you focus on your core business. A selection of predefined service options matching your needs provides optimal, more reliable performance, extended drive lifetime and improved cost control. So you can reduce the risk of unplanned downtime and find it easier to budget for maintenance.

We can help you more by knowing where you are!
Register your drive at www.abb.com/drivereg for extended warranty options and other benefits.

Need to extend your assets' lifetime?

Maximize your drive's lifetime with our services.

Example services include:
- Life Cycle Assessment
- Upgrades, Retrofits and Modernization
- Replacement, Disposal and Recycling
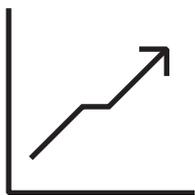

Life cycle management

Is performance most critical to your operation?

Get optimal performance out of your machinery and systems.

Example services include:
- Advanced services
- Engineering and Consulting
- Inspection and Diagnostics
- Upgrades, Retrofits and Modernization
- Workshop Repair
- Tailored services

Performance improvement
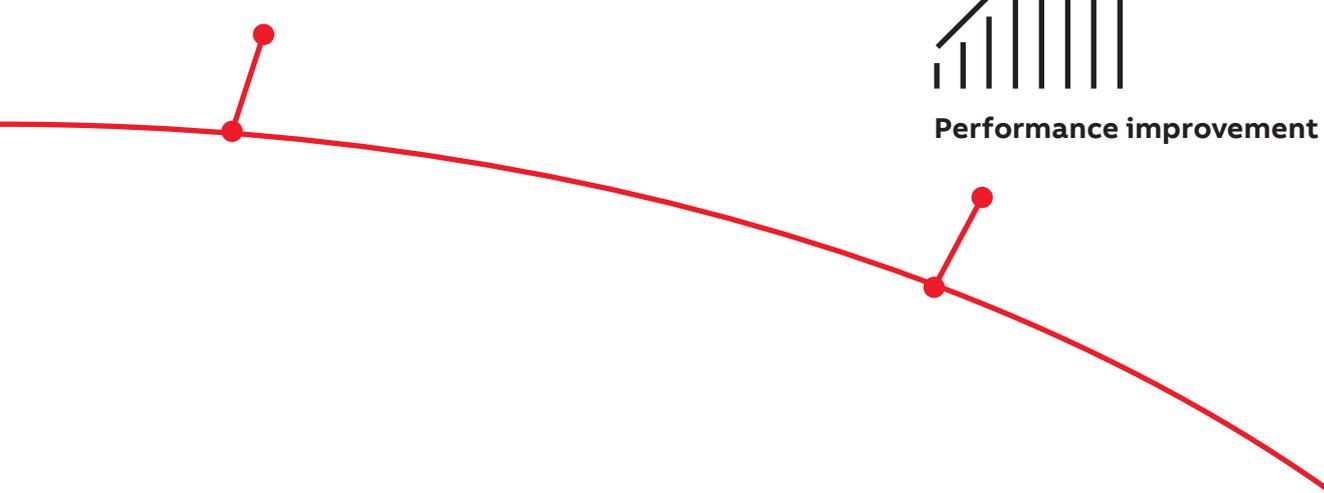

ABB Automation products

DCS550

ABB offers the machine building industry a DC drive which combines state-of-the-art drive technology with proven DC technology. The new converter series is suited both for new installations and retrofitting, due to its robust technology and compact design.

Integrated "Winder", programmability and a powerful field converter provide machine manufacturers with a maximum of flexibility in terms of machine integration.

AC500

ABB's powerful flagship PLC offering provides wide range of performance levels and scalability within a single simple concept where most competitors require multiple product ranges to deliver similar functionality.

ACS500

A PLC based modular automation solution that makes it easier than before to mix and match standard and safety I/O modules to expertly meet your safety requirements in all functional safety applications. "Extreme conditions" version is also offered.

Programmability

Dirve Application Builder integrates the engineering and maintenance for PLC, drives, motion, HMI and robotics. It complies with the IEC 61131-3 standard offering all five IEC programming languages for PLC and drive configuration. Dirve Application Builder supports a number of languages and comes with new libraries, FTP functions, SMTP, SNTP, smart diagnostics and debugging capabilities.

DCT880

ABB's DCT880 offers their customers a thyristor power controller for the accurate control of ohmic or inductive heating elements and infrared radiators in glass, plastic, annealing, drying, melting or heating applications. DCT880 controllers are available in eight compact sizes, ranging from 20 A to 4,200 A.

The integrated three-phase current measurement allows for implementing all load configurations from star, delta, single- and two-phase all the way to reactive-power optimized transformer control.

DCS880-R

The DCS880-R Rebuild Kit replaces the control electronics of an existing DC drive. All power components, including the thyristors, are retained. The DCS880-R Rebuild
Kit is suitable for almost all existing drives from different manufacturers. In addition, ABB has developed specifically tailored solutions for some existing types of converter: this is a cost-efficient option for DC Drive revamping.

All-compatible drives portfolio

The all-compatible drives share the same architecture; firmware platform, tools, user interfaces and options. Yet, there is an optimal drive from the smallest water pump to the biggest cement kiln, and everything in the between. When you have learned to use one drive it is easy use the other drives in the portfolio.

Safety products

ABB safety products are helping machine builders to create production-friendly and safe work environments for operators. We deliver machine safety solutions for single machines or entire production lines. Our long experience of helping customers making solutions for demanding environments has made us experts in combining production demands with safety demands for production-friendly solutions.

Save time, ease troubleshooting
and improve drive performance with ABB smartphone apps

## Better connectivity and user experience with Drivetune
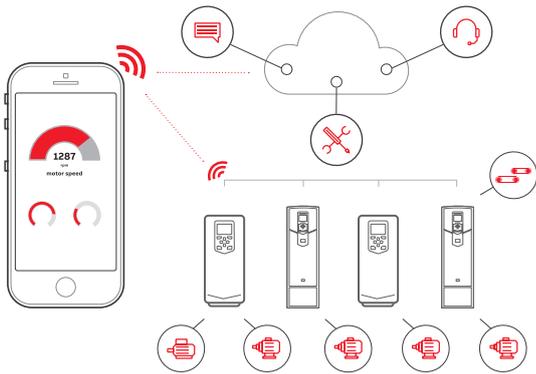

Easy and fast access to product information and support

Manage your drives and the process lines and machines they control

Easy access to cloud-based drive and process information from anywhere via an online connection

Start up, commission and tune your drive and application
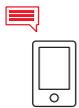

Simplified user guidance with instant access to drive status and configuration

Performance optimization via drive troubleshooting features and fast support

Services and support on the go with Drivebase
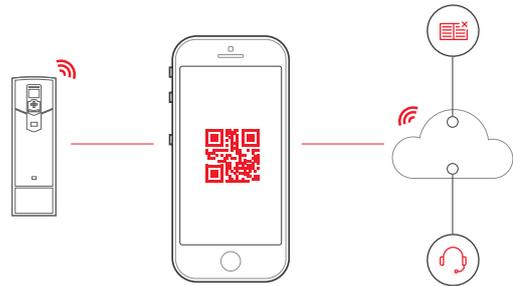

Search for support documents and contacts

Maintain and service all your installed drives on one or multiple sites

Get 6 months extra warranty for free by registering your drive with the Drivebase app

Access your product and service information in the cloud from anywhere

Access your drive's diagnostics data

Push notifications for critical product and service updates

Access information anywhere

Download the apps using the QR codes below or directly from the app stores
